

## **Glossary**

1. **Cornice:** The projecting top section of an entablature.
2. **Entasis:** An almost imperceptible swelling added to the tapering of the column shaft. It is a necessary refinement to correct the optical illusion of concavity that results if the column is straight.
3. **Fascia:** The plain horizontal band or bands, often combined with moldings, that make up the architrave, the lowest, third part of the entablature.
