

## **Glossary**

**Emulsion paint:** A coating material in which the medium is a dispersion of an organic binder in water.

**Enamel paint:** Pigmented organic polymeric binders that simulate the appearance, flow, smoothness and gloss of fused inorganic coatings.

**Epoxy paint:** A coating material based on an epoxy resin.

**Flaking:** Lifting of the coating materials from the substrate in the form of flakes or scales.

**Flashing:** The development of patches glossier than the general finish

**Full gloss:** The film of a coating material that, when dry, has a smooth almost mirror-like surface.
