

Summary

In this lecture the student is educated on the basic concept of painting and paints. The student also learns what are the components of a paint and how the various ingredients are put together and the "Paint" is manufactured.

Some of the COMPONENTS and their role are as follows:

The pigments give the paint color; solvents make it easier to apply; resins help it dry; and additives serve as everything from additive to antifungicidal agents

The students learn what are the characteristics of a good paint and what are the different types of paints available; both of which in turn will help them choose the perfect paint for various purposes/surfaces.
