

SUMMARY

This lecture looks into particularly in detail about two types of concrete that have been developed and used in special cases as well as in global scale. The first being, No fines concrete, which is special type of concrete, its properties and applications are discussed. It has been famously used in a post war period in England which is also discussed in detail highlighting its advantages. The second, FRC or fiber reinforced concrete, which uses fibrous material to add strength to itself. Its various properties, applications and a famous example are discussed in detail, and also how an important building material it has come out to has also been highlighted
