3. Explain the properties of water in landscaping?

Generally, the aquatic element constitutes a bridge between landscape and literature or other arts as well as a means of breaking the monotony caused by solid materials used by architects or artists. Water is a basis of literary and artistic perception of landscape as well as a neutral architectural element which cannot be clearly categorised as "natural" or "built". The universality of aquatic element as aesthetic factor and architectonic means becomes evident through the multiplicity of its use and perception as well as its diachronic and wide implementation and resonance.

4. Explain the need for landscaping in interiors?

Interior landscape helps to improve the indoor air quality. The indoor landscape also helps to improve the aesthetics of the space. Landscape elements make the space look livelier. It has been proven benefits in the health and well being of the end user of the space.
