

Summary

This session would lend you information on the key parameters that would lend you information of the factors to be considered on a housing layout. Then we move on to study the concepts that relate to block, boundary and clusters. This would lend us knowledge about community and sociability in a housing complex. One of the most important items of the design process is the optimization of the utility network, this would be touched upon its efficiency and usage. Different forms of electricity and water supply, surface draining and sewage disposals would be explained with images. The chapter finally concludes with insights on the common facilities including education, health and other social aspects that would in turn support the housing community as a whole.
