

Glossary

1. **Experience:** Knowledge or skill gained over time.
2. **Motion pictures:** A sequence of moving objects photographed by a camera and providing the optical illusion of continuous movement when projected onto a screen.
3. **Illustrations:** The action or fact of illustrating something.
4. **Symbolic level (language-based):** Sometimes called the abstract stage, the last stage takes the images from the second stage and represents them using words and symbols. The use of words and symbols "allows a student to organize information in the mind by relating concepts together" (Brahier, 2009, p. 53). The words and symbols are abstractions, they do not necessarily have a direct connection to the information.
5. **Demonstrations:** It is a visualized explanation of important fact, idea, or process through the use of pictures, drawings, film and other types of media in order to show how things are done and facilitate clear and effective learning.
