

Summary

From this chapter we summarized that, outdoor sports facilities are relatively easier to construct and maintain. Apart from the usual considerations such as drainage, watering, sloping etc, surface specification – natural or synthetic are also equally important in the modern era. The major concern of physical education and sports personnel is planning, constructing and management of open play fields- athletic pitch etc. The institution with high tradition of intramurals and extramural attach great important to planning, construction, care and maintenance and management of open play field. Planning, construction, maintenance and management of facilities have become a serious obligation for all concerned. The planning and construction of outdoor facilities must take into consideration the nature of facilities, the need and interest of the institution , the programmes of the development of physical education and sports.
