

## **Objectives**

After collecting data, they must be classified and presented in meaningful forms to have better insight of a data set. One of the main aspects of describing a data set is summarization and description of the overall pattern of the data by Presentation of tables and graphs. This unit introduces the frequency distribution or frequency table and techniques of construction of a frequency table. After reading this unit we will be able to:

- define frequency table
- understand meaning, importance and uses of frequency table
- construct frequency table for grouped and ungrouped data
