OBJECTIVE

- To know about the subject econometrics in vide spectrum

- To understand clearly the concepts involved in two variables regression model including estimation and testing problems

- To know clearly about the concepts involved in three variables regression models. In particular about multiple and partial correlation coefficients and their estimation as well as testing problems

- To become familiar with the standard results for two and three variables linear models in terms of different formulae

- To be familiar with interpretation of the computer output for two and three variables linear models
