

OBJECTIVE

Apart from meat, a sizeable quantity of byproducts are generated in the slaughterhouses. Many byproducts are potential sources for value added products. They are either discarded as waste or under utilized in India.

Improper handling of byproducts leads to their putrefaction resulting in to environmental pollution. Recovery of byproducts and their conversion to value added products is essential for improvement of economy of meat industry. This also minimizes public health hazards and environmental pollution.

The objective of this topic is to study handling and processing of byproducts from animal processing industry through the following aspects.

- 1.Types of byproducts
- 2.Handling and preservation of byproducts
- 3.Processing of byproducts
- 4.Utilization of byproducts
- 5.Regulatory aspects
