Summary

- A bar chart or bar diagram is a chart with rectangular bars, with their lengths proportional to the values that they represent. The bars can be plotted vertically or horizontally.

- Types of Bar Chart:
    - Horizontal bar: The data represented as a bar chart in a horizontal fashion, is called as the horizontal bar chart.

    - Vertical bar: The data represented as a bar chart in a vertical fashion, is called as the vertical bar chart.

    - Multiple bar: When two or more interrelated series of data are depicted by a bar chart, such a diagram is known as a 'multiple bar diagram'.

    - Sub-divided or component bar: This diagram will show subdivisions or components in a single bar.

- Few more Bar Charts or Diagrams are:
    - Deviation bar
    - Duo-direction
    - Broken bar
    - Sliding bar
    - Pyramid bar
